EXPERIENCE

KES Inc - System Engineer III | San Diego, CA

Mar 2024 – Present

- Lead 20 System and Network Engineers for Systems Operability Tests onboard 75 US Naval Ships to ensure flawless functionality across all computer and network systems
- Crafted a Python script for systematic analysis of spreadsheets across multiple ships, effectively identifying recurring issues and enhancing problem-solving efficiency, while also analyzing over 70 reports per US Naval ship provided by engineers to capture critical issues

Sayres and Associates - Systems Analyst | San Diego, CA

May 2020 – Nov 2023

- Mitigated 100+ critical issues per ship by leading System and Network Engineers through designed test plans and analyzing daily system reports
- Primary auditor for analyst reports, enhancing database accuracy by identifying and correcting errors, significantly improving the quality of issues captured across the US Naval Fleet

Sayres and Associates - Network Engineer | San Diego, CA

Aug 2019 – May 2020

- Devoted over 100 hours troubleshooting, installing, and reconfiguring two network critical switches and rebuilt the proxy server (Microsoft TMG), returning the network to fully operational
- Rebuilt and configured 60+ virtual machines by connecting and optimizing hardware/software with network functionality; improved system stability and reduced downtime by 40%
- Ensured reliable connectivity by providing end-to-end network and communications systems support during deployment and fleet wide operations

US Navy - Information Technology Specialist | San Diego, CA

Oct 2013 – Aug 2019

- Lead Consolidated Afloat Network Enterprise Services (CANES) Administrator with direct, hands-on role in 3 tech refreshes, rebuilding 80+ virtual machines, and troubleshooting 250+ various systems and equipment
- Maintained and configured Cisco Routers, Switches, Wireless Access Points, and Firewalls, ensuring 300+ end users experience uninterrupted access, and limiting device communications to only approved necessary processes

PROJECTS

QuakeData Enhancer

[View Project](#)

- Developed a Python application to fetch real-time earthquake data from USGS API, enhancing location data with OpenCage Geocoding API; generated comprehensive CSV datasets, advancing data processing and storage capabilities by 40%
- Utilized: Python, requests library, datetime library, json library, xmltodict library, USGS API, OpenCage Geocoding API, CSV module

CABInterpreter

[View Project](#)

- Engineered a robust custom language interpreter supporting arithmetic, conditional statements, function definitions, and loop structures; facilitated intuitive scripting for workout routines and macro calculations, enhancing user experience and reducing manual entry time by 30%
- Utilized: Python, regex library

Personal Website

[View Project](#)

- Designed and deployed a personal website using JavaScript, CSS, and HTML, integrating a Total Daily Energy Expenditure Calculator and additional projects to showcase software development skills, and used GitHub for deployment
- Utilized: JavaScript, CSS, HTML, GitHub

EDUCATION

San Diego State University

San Diego, CA

BS in Information Systems, Minor in Computer Science

May, 2025

GPA: 3.94

Relevant coursework: Advanced Programming Languages, Data Structures & Algorithms, Database Theory & Implementation

LANGUAGES & CERTIFICATIONS

Languages: Python, JavaScript, Java, C++, SQL

Certifications: [CodePath](#) Technical Interview Prep (June 2024 - August 2024), CompTIA Sec+/Linux+/A+

Government Security Clearance: **Top Secret**
