EXPERIENCE

KES Inc - Systems Engineer | San Diego, CA

Mar 2024 – Present

- Architected and deployed enterprise Linux infrastructure across multiple Unix-based systems including OpenBSD for LDAP/DHCP services, FreeBSD mail servers, and Rocky Linux NFS implementations, supporting 75+ US Naval Ships with zero downtime
- Automated infrastructure management by implementing Ansible orchestration on OpenBSD to collect and centralize logs from distributed server environments, reducing manual monitoring overhead by 85% and improving incident response time
- Developed Python automation tooling for systematic analysis of operational data across naval fleet, processing 70+ engineering reports per ship and identifying critical system patterns that improved troubleshooting efficiency by 40%
- Containerized web services deployment using Docker on Ubuntu Server infrastructure, implementing scalable microservices architecture that enhanced system reliability and reduced deployment complexity

Sayres and Associates - Systems Analyst | San Diego, CA

May 2020 – Nov 2023

- Engineered comprehensive testing frameworks and led technical teams through systematic validation of network and system architectures, successfully mitigating 100+ critical infrastructure issues per deployment cycle
- Established quality assurance protocols as primary technical auditor for system analysis reports, implementing database validation processes that improved data integrity by 95% across US Naval Fleet operations

Sayres and Associates - Network Engineer | San Diego, CA

Aug 2019 – May 2020

- Implemented security-focused infrastructure by rebuilding and optimizing 60+ virtual machines with hardened Linux configurations, achieving 40% reduction in system downtime while maintaining security compliance
- Administered enterprise Unix/Linux environments including intrusion detection system deployment, security baseline implementation, and critical network infrastructure maintenance across distributed systems
- Executed incident response operations totaling 100+ hours of security troubleshooting, network reconfiguration, and infrastructure hardening to maintain operational security posture

US Navy - Information Technology Specialist | San Diego, CA

Oct 2013 – Aug 2019

- Architected Security Operations Center (SOC) infrastructure as Lead Security Operations Administrator, implementing comprehensive SIEM deployment across 250+ systems for advanced threat monitoring and detection
- Managed large-scale virtualization environment by building and maintaining 80+ virtual machines with integrated security monitoring, establishing enterprise-grade defensive capabilities
- Configured Cisco security infrastructure for network segmentation and data loss prevention, implementing monitoring solutions that prevented unauthorized communications and data exfiltration attempts

INFRASTRUCTURE ENGINEERING PROJECTS

QuakeData Enhancer

[View Project](#)

- Developed Python application for real-time earthquake monitoring using USGS API integration, implementing secure data processing pipeline that increased throughput by 40%
- Engineered comprehensive data transformation utilizing multiple APIs (USGS, OpenCage Geocoding) with robust error handling and CSV output generation for downstream analysis

CABInterpreter

[View Project](#)

- Built full-featured programming language interpreter supporting advanced computational features including arithmetic operations, conditional logic, function definitions, and iterative constructs
- Implemented lexical analysis and parsing using Python regex libraries, demonstrating strong understanding of compiler theory and language design principles

Machine Learning Kickstarter Predictor

[View Project](#)

- Developed end-to-end machine learning pipeline with comprehensive data preprocessing using pandas and NLTK, implementing ensemble methods (Decision Tree, K-NN, Neural Networks) for predictive modeling
- Optimized feature engineering through CountVectorizer implementation and stop-word processing, achieving production-ready model accuracy for business outcome prediction

TECHNICAL SKILLS

Programming & Scripting: Python, JavaScript, Java, C++, Bash, SQL
Version Control & CI/CD: Git, GitHub
Configuration Management: Ansible, Custom service management
Containerization & Orchestration: Docker, Kubernetes, Portainer
Operating Systems: Linux (Ubuntu, Rocky Linux), Unix (OpenBSD, FreeBSD), Windows Server
Cloud & Virtualization: AWS, Azure, VMware, Proxmox, VM Management, NFS, API Integration, Web Services
Security Technologies: SIEM, IDS/IPS, Certificate Authority, LDAP, Network Security
Penetration Testing: Kali Linux, Metasploitable, Nmap, Nikto, Gobuster, Vulnerability Assessment
Network Services: DHCP, DNS, Network Reconnaissance, Service Hardening

EDUCATION

San Diego State University
BS in Information Systems, Minor in Computer Science
GPA: 3.89, Summa Cum Laude
Relevant coursework: Advanced Programming Languages, Data Structures & Algorithms, Database Theory & Implementation, Linux System Administration, Applied Computer Security

San Diego, CA

CERTIFICATIONS

Security Clearance: **Top Secret**
Certifications: **CompTIA Sec+** and **Linux+**
